Priority

The specification, as filed, contains reference to applications 08/329,546 and 08/026,415. Therefor the amendment to the specification filed 4/12/01, amending the continuity data, is incorrect. Additionally, several of the applications listed in the continuity data have become patents and such information should be listed.

Drawings

The corrected or substitute drawings were received on 7/19/01. These drawings are accepted.

Specification

A substitute specification including the abstract but excluding the claims is required pursuant to 37 CFR 1.125(a) because the text quality is so poor as to render portions unreadable.

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and must be accompanied by: 1) a statement that the substitute specification contains no new matter; and 2) a marked-up copy showing the amendments to be made via the substitute specification relative to the specification at the time the substitute specification is filed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2851

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 32-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wash (4,974,096) and European Patent Application 0 428 072 A2 (here after '072 reference).

Wash differs from the claimed invention in that Wash provides magnetic data recording tracks for storing data in the camera and in the laboratory. Wash teaches that "optical recording of eye-readable symbols or machine readable symbols" is known for photographic film.

The '072 reference teaches providing a film with optical and magnetic data recording. The '072 reference teaches that the camera records data optically and the photo lab records data magnetically. This provides the benefit of a simplified camera, as magnetic recording requires steady state film driving for accurate recording. And provides the benefit of data which cannot be accidentally erased after the film is developed.

It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the Wash device to use a film such as that of the '072 reference. One would have been motivated to so modify Wash for the benefit of use with the film taught by the '072 reference.

The Wash statement "optical recording on the film has only limited use, because once the film has been developed no further recording may be done" does not teach away from the claimed combination as the '072 reference recognizes this limitation of optical data recording.

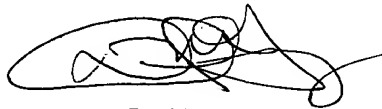

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Milch and Farrell et al. references teach optical data reading from photographic film for use in a film scanner.
